Website Project Proposal: Sollie's Bakery

Organisation Overview

Name: Sollie's Bakery

Sollie's Bakery is a small family run bakery established in 2019 in Johannesburg, South Africa. What began as a home-based baking operation selling bread and cupcakes to neighbours has grown into a small storefront serving fresh bread, pastries and custom celebration cakes for the local community. The bakery currently relies on word-of-mouth referrals and a basic Facebook page to reach customers.

Mission: To bring people and communities together through freshly baked, high-quality products made with locally sourced ingredients and genuine care.

Vision: To become the most trusted neighbourhood bakery in Johannesburg, known for consistency, creativity and community involvement.

Target Audience: Local residents aged 20-55, working professionals seeking convenient daily bread and pastries and customers planning birthdays, weddings and corporate events who require custom cakes.

Website Goals and Objectives

The website will give the bakery a professional which will always be available and have presence beyond social media.

Specific goals include:

- Increase local brand visibility and attract new customers searching online for bakeries near them.
- Generate leads and enquiries for custom orders (celebration cakes, catering, corporate gifting).
- Provide essential information quickly: menu, prices, location, and opening hours.

Key Performance Indicators (KPIs) to measure success include:

- A minimum of 300 unique website visitors per month within the first three months.
- At least 15 custom order enquiries submitted via the contact form per month.
- An average session duration of two minutes or more which will indicate genuine engagement with content.

Current Website Analysis

Sollie's Bakery does not currently have a dedicated website, its only online presence is a Facebook page.

This presents several weaknesses:

- No dedicated space to showcase the bakery's story, quality ingredients or customer testimonial
- Opening hours, location and contact details are scattered across posts and hard to find quickly
- No enquiry or booking mechanism for custom cake orders

- No mobile-friendly, structured way for customers to browse products or prices

These gaps directly inform the improvements the new website will address which will particularly bring ease of navigation and a clear enquiry channel

Proposed Website Features and Functionality

- Homepage: introduction, hero banner, and featured products.
- About Us: bakery history, mission, and team introduction.
- Menu/Products page: categorised bread, pastries, and cakes with images and prices.
- Gallery: photographs of finished cakes and daily products.
- Custom Orders/Contact page: enquiry form, phone number, email, and embedded map.
- Testimonials section: customer reviews to build trust.

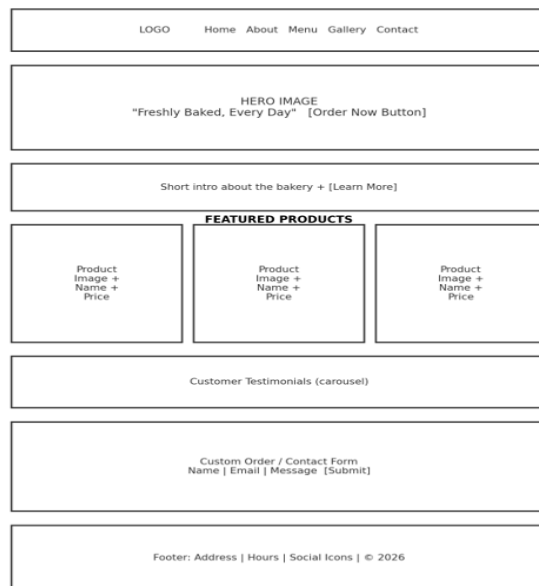

Design and User Experience

Colour Scheme: Warm, appetising tones – terracotta (#B5651D), cream (#FBF4E6), and mustard gold (#D9A441) accents, evoking freshly baked bread and a cosy bakery atmosphere

Typography: Playfair Display for headings (elegant, bakery-appropriate serif) paired with Poppins for body text (clean and highly readable)

Layout and Design: A clean, single-column, mobile-first layout with generous white space, large appetising product photography and clear calls to action such as “Order Now”.

User experience priorities include simple top navigation, thumb-friendly buttons for mobile users, accessible colour contrast and a maximum of three clicks to reach the enquiry form from any page. A low-fidelity wireframe of the proposed homepage layout is shown below:

Technical Requirements

- **Domain name:** sollie’sbakery.co.za, registered through a local South African registrar
- **Hosting: Affordable** shared hosting suitable for a static site e.g Afrihost or xneelo, with a room to upgrade later
- **Core languages/frameworks:** HTML5 for structure, CSS3 for styling and responsiveness and JavaScript for interactivity
- **Version control:** Git, with the project hosted in a private GitHub repository as required

Timeline and Milestones

Milestone	Key Deliverables	Target Date
Part 1: Planning & Proposal	Approved project proposal, research, and file structure	14 August 2026
Part 1: Foundation	HTML structure for all core pages	14 August 2026
Part 2: Visual Design	CSS styling, responsive layout, UX refinements	18 September 2026
Part 3 Functionality & SEO	JavaScript features, SEO optimisation, functional forms	18 September 2026

Budget

- Domain registration (.co.za, annual): approximately R150 – R200.
- Shared web hosting (annual): approximately R900 – R1,200.
- Stock/product photography: R0, using the bakery’s own product photos.
- Ongoing maintenance and content updates: approximately R300 per month, if outsourced after project completion.

Estimated total first-year cost: approximately R1,050 – R1,400, excluding optional ongoing maintenance.
